

Group 10 Sprint 3 report

Group Members: Aasif Versi, Matt Goodman, James Childress, Enrique Mitchell

User Stories we completed:

- AWS - and web link make the website live && docker image 2 Pt - Aasif/Matt
- Design make it look nice, bootstrap fonts and stuff 1 pt, nicer than cheat day - Matt
- Thumbnails for diary entries 2pts - James
 - Search api for item, maintain in food diary image for item, every item in food diary should have image
- Weight tracking w/ visualization - 1 pt - Enrique
- Voice api - sound hound or google voice - 1pt - Aasif
- Export the information for the user - CSV file of foods - 1 pt

All the user stories were completed for this iteration.

User Stories we did not complete:

- None

Known Bugs: N/A

Introspection:

- I don't think that there are any additional features that we would have added if we had more time. We finished all of the user stories that we had proposed in our original document and even added a few more
- If we were to start over I would have done a better job with using front end frameworks rather than just using basic html. Also we would have been more careful setting up the databases so that we did not have to do a complete reset once we got through the first few weeks of the project.
- It is okay to share our code.

We did not have a customer
